Panel – The Generic Longitudinal Business Process Model NADDI 2013

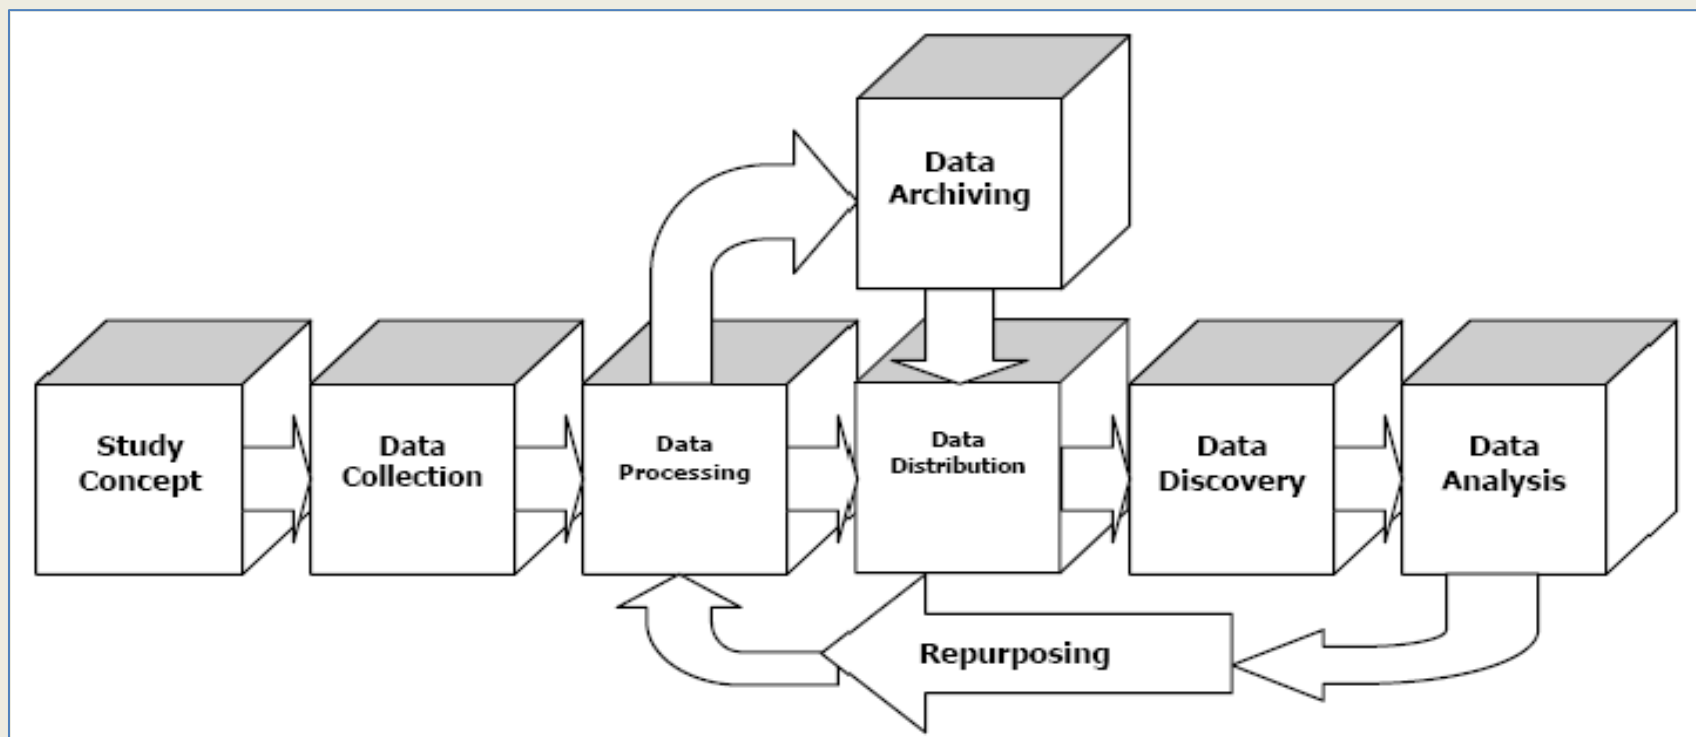

Paper Just Published

- **Generic Longitudinal Business Process Model**
Ingo Barkow, William Block, Jay Greenfield, Arofan Gregory, Marcel Hebing, Larry Hoyle, Wolfgang Zenk-Möltgen
- The outcome of a workshop held at Schloss Dagstuhl - Leibniz Center for Informatics in Wadern, Germany (Dagstuhl Event 11382), September, 2011
- <http://dx.doi.org/10.3886/DDILongitudinal05>

Intent

- Generalized view of a longitudinal research project process
- Vocabulary to describe processes
 - Planning
 - Comparison and Harmonization of projects
 - Documentation of projects
 - Automation?

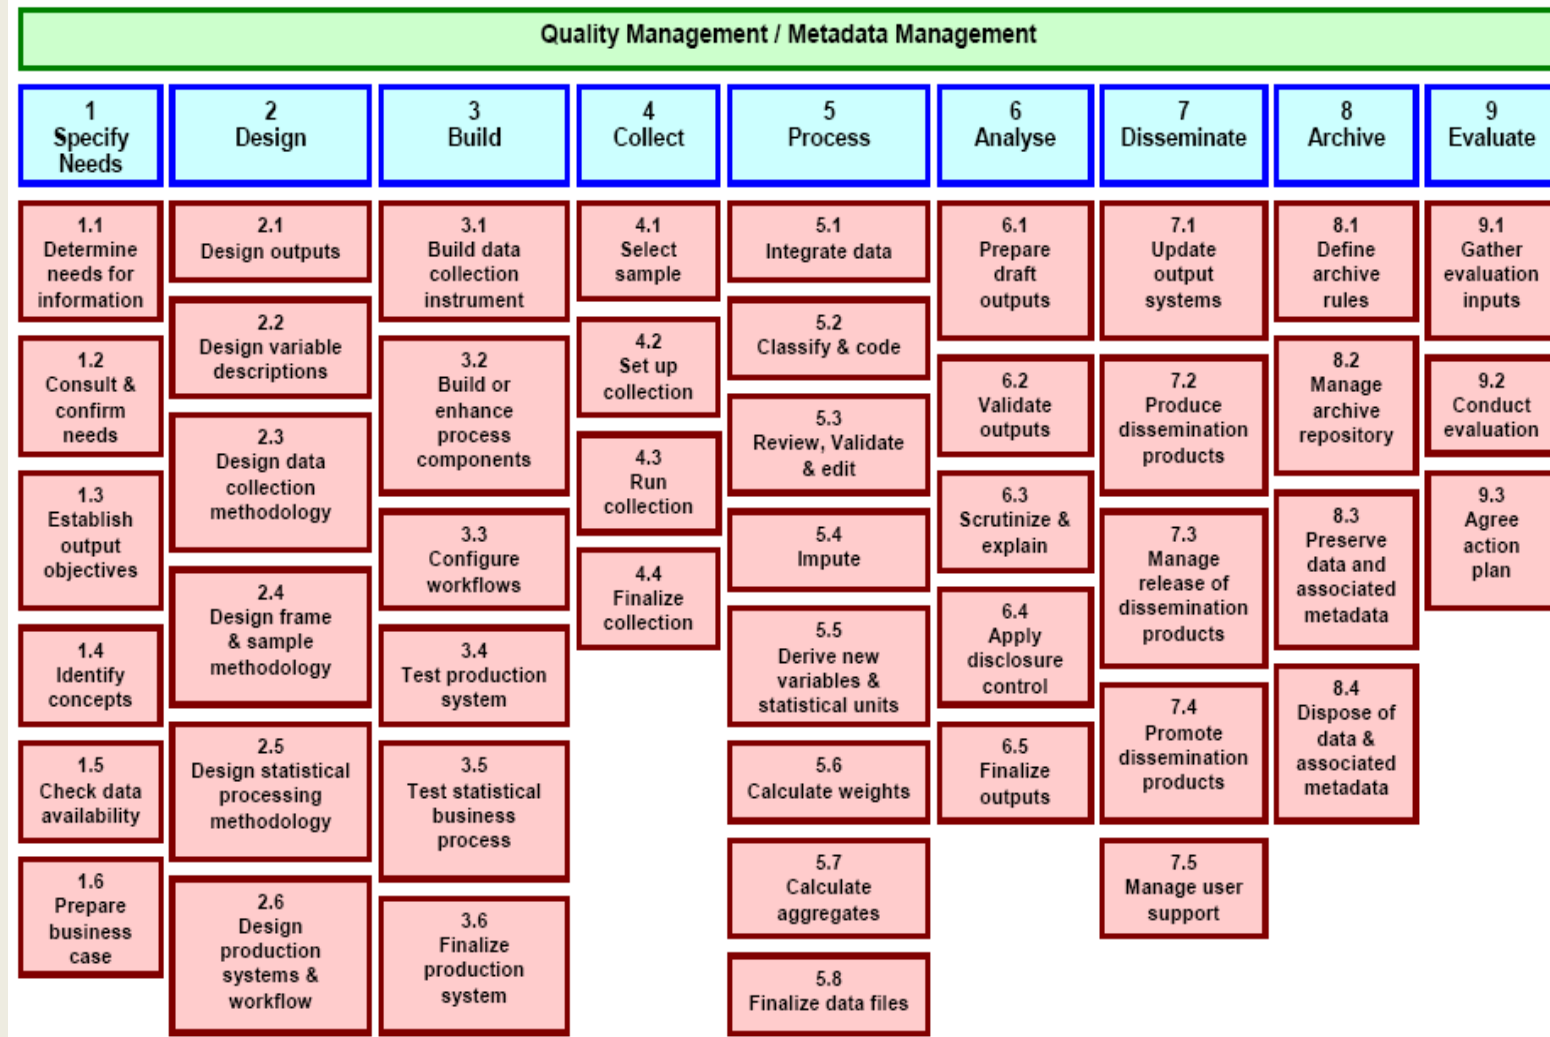

Background – DDI Lifecycle Model

Process, and data,
and metadata flow

GSBPM (UNECE)

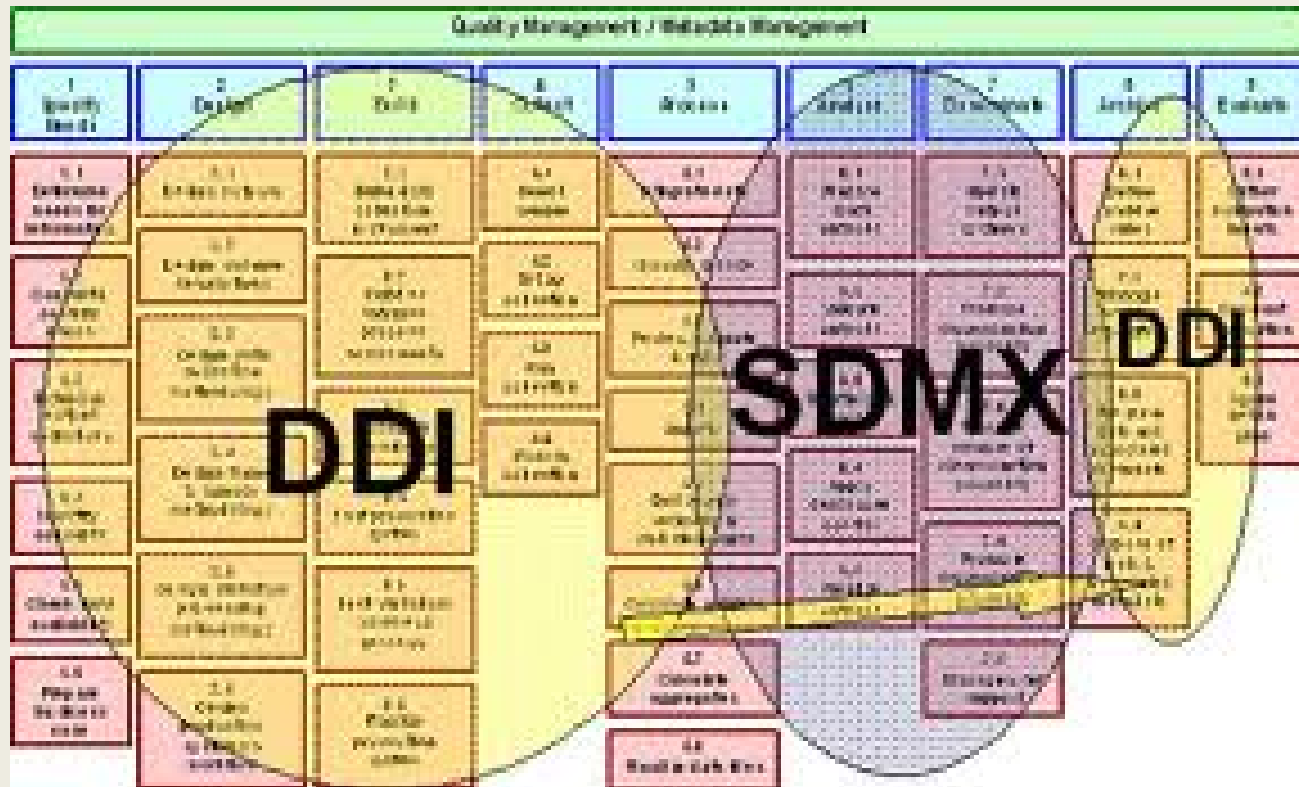

Generic Statistical Business Process Model

FROM: Generic Statistical Business Process Model Version 4.0 – April 2009

<http://www1.unece.org/stat/platform/download/attachments/8683538/GSBPM+v4.0.doc?version=1&modificationDate=1256636086281>

GSBPM, DDI, SDMX Relationships

Generic Statistical Information Model (GSIM)

- "the first internationally endorsed reference framework for statistical information"
- "GSIM is a reference framework of information objects, which enables generic descriptions of the definition, management and use of data and metadata throughout the statistical production process. It provides a set of standardized, consistently described information objects, which are the inputs and outputs in the design and production of statistics."

Generic Longitudinal Business Process Model

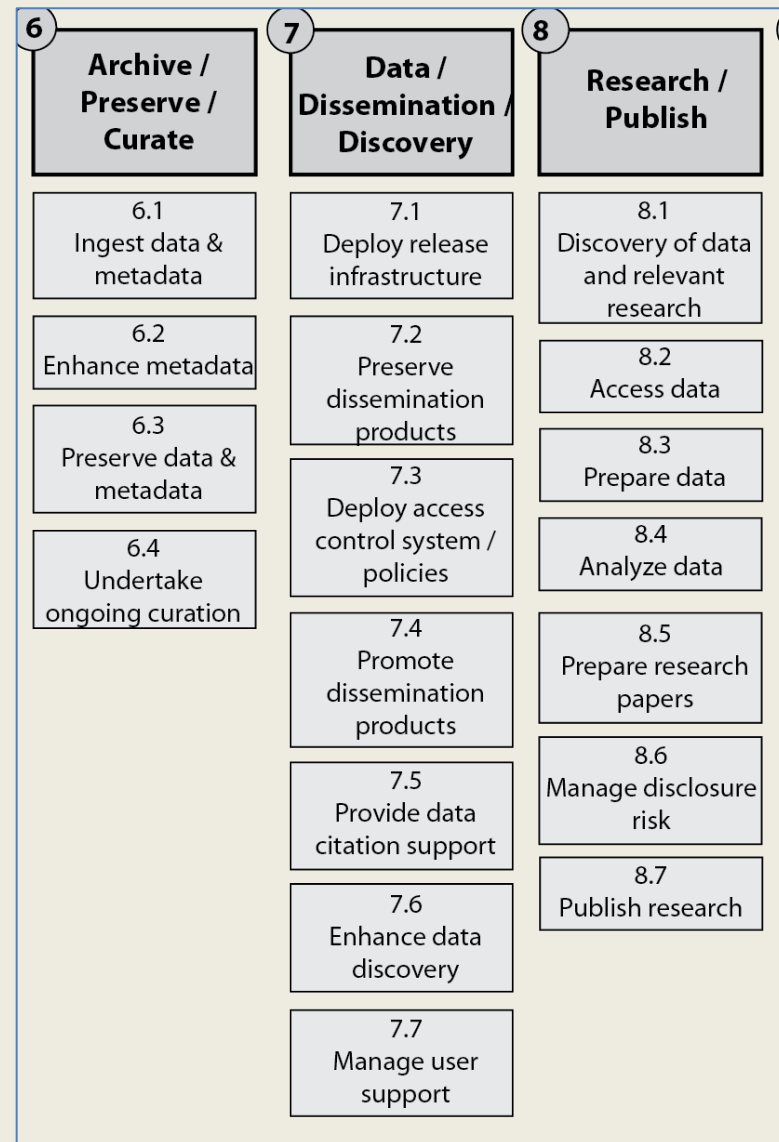

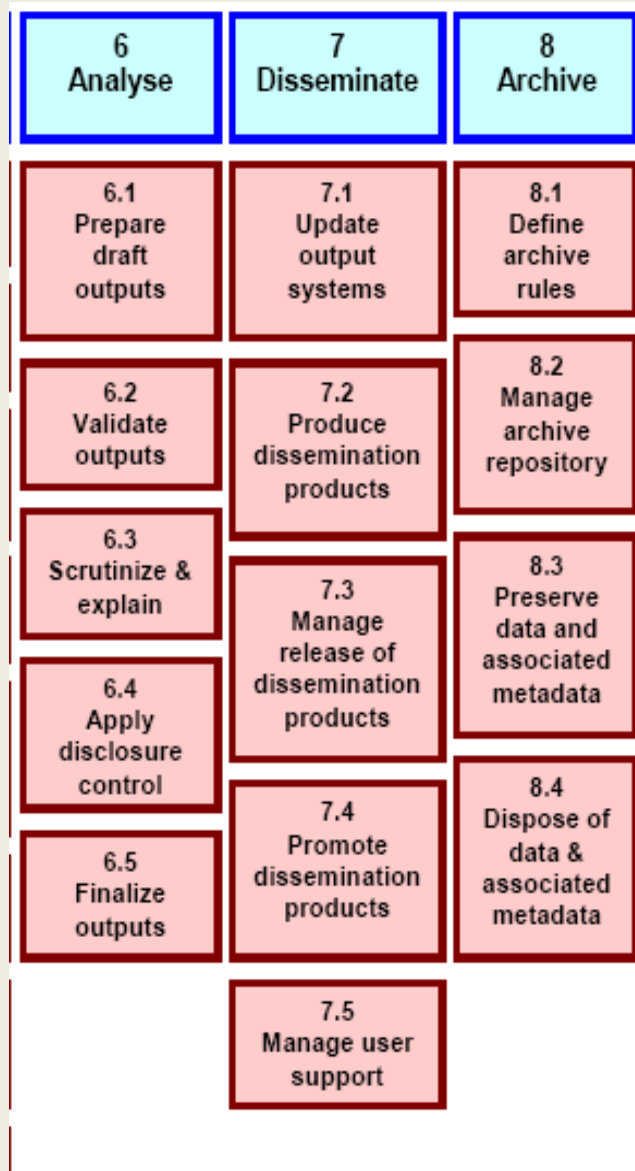

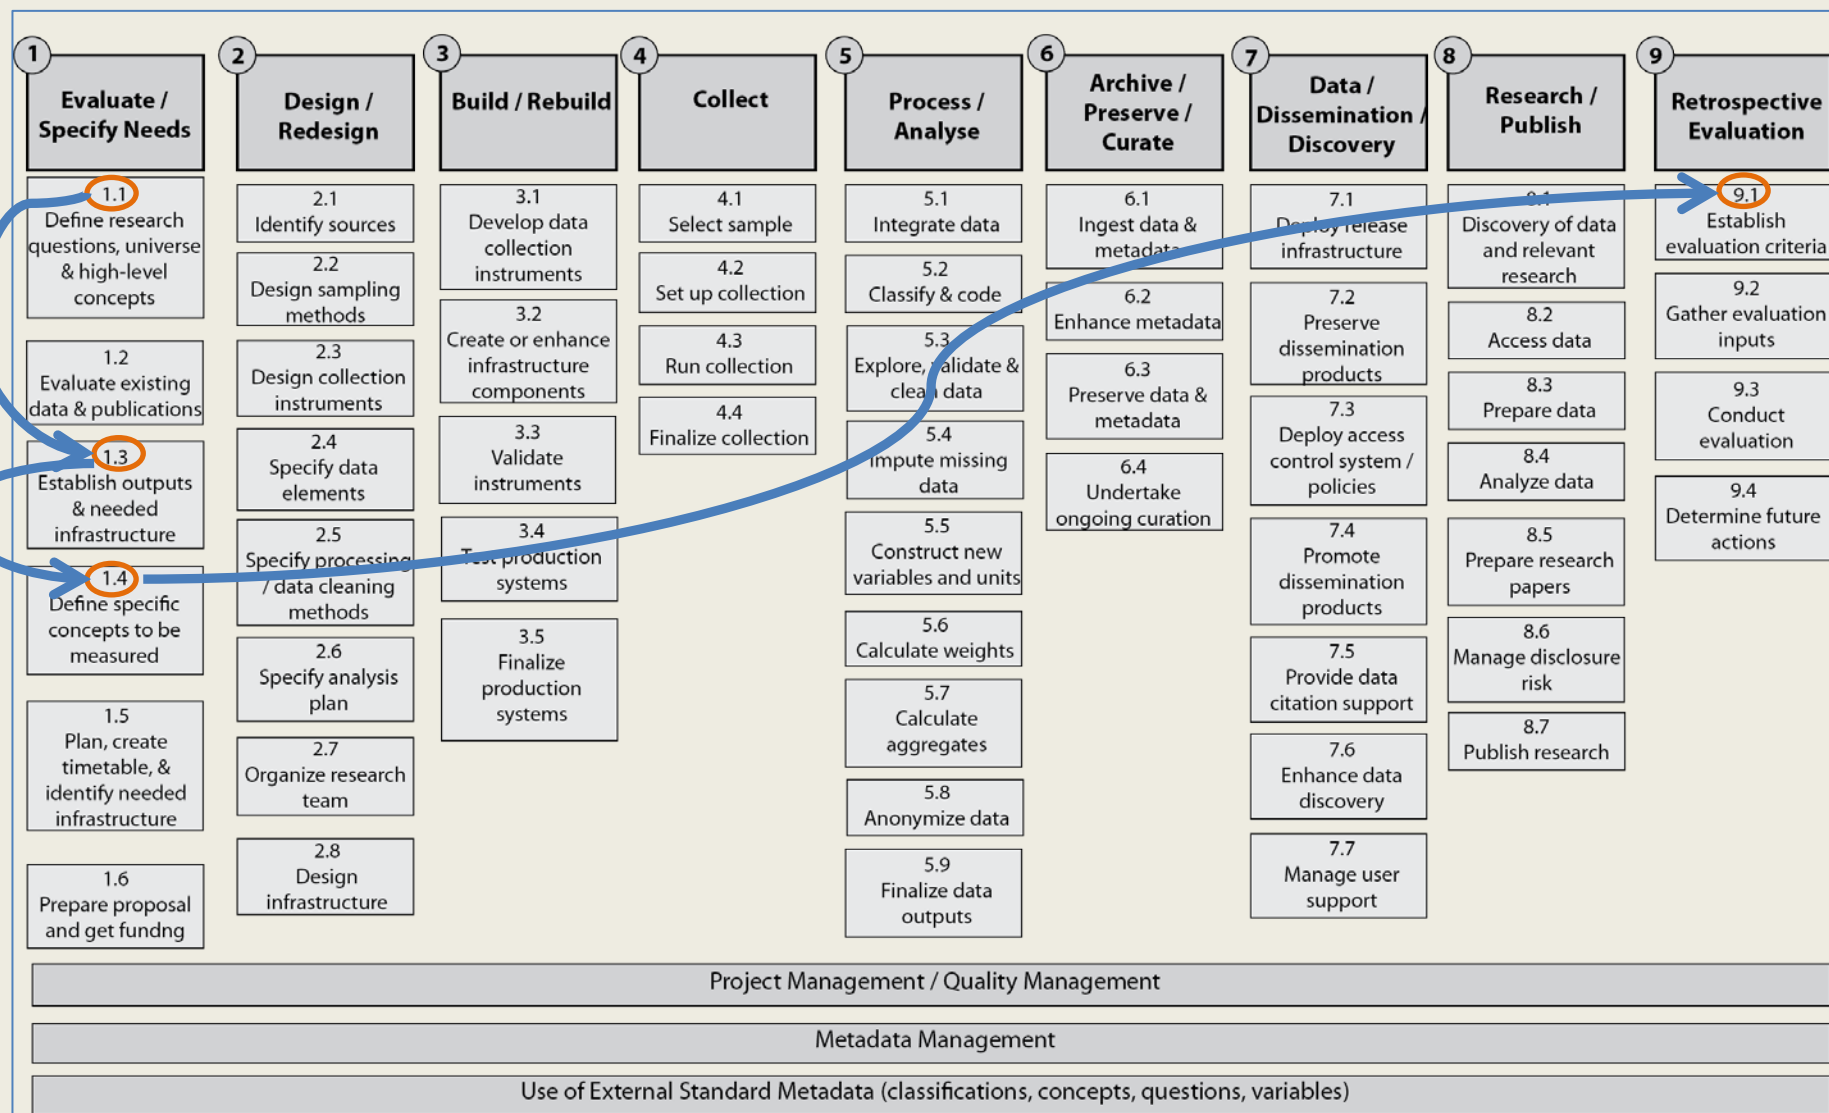

GSBPM vs. GLBPM

GSBPM vs. GLBPM

No Strict Sequence

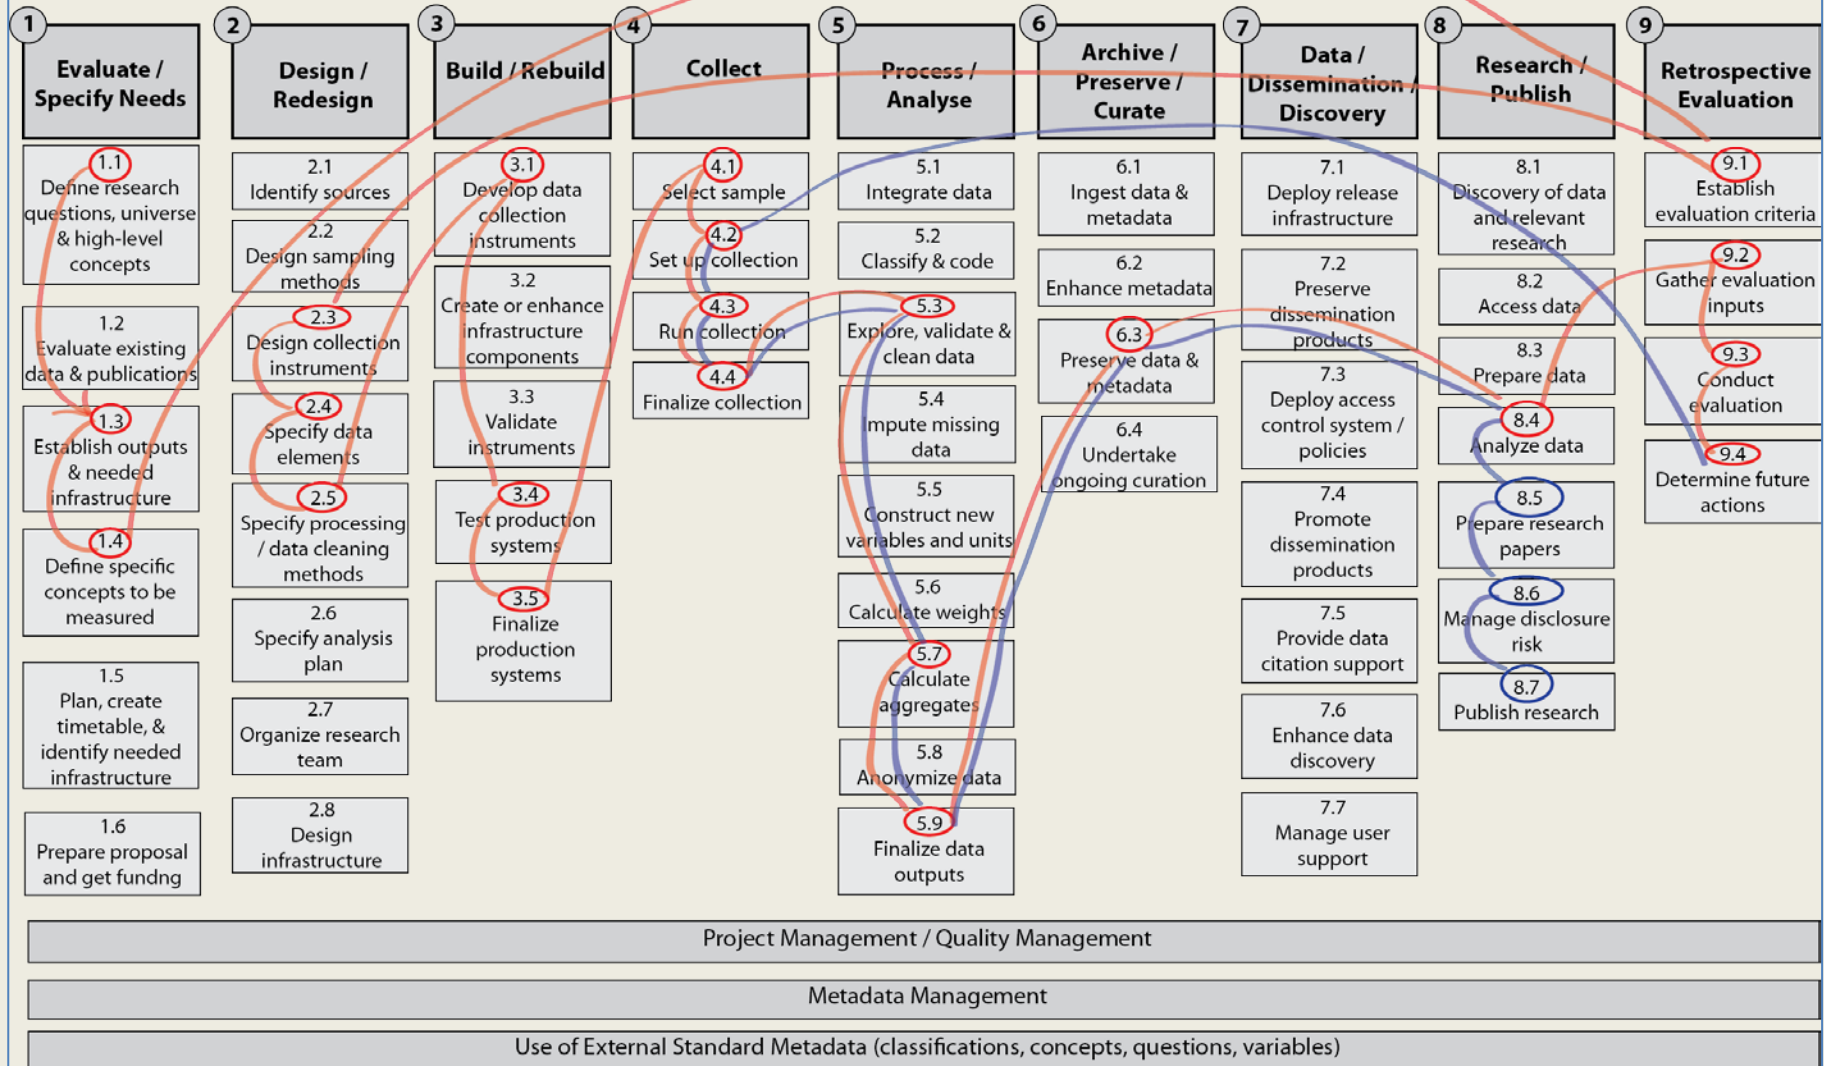

While the activities are numbered in a sequence, projects may use a subset of them in different orders.

One Longitudinal Project Sequence

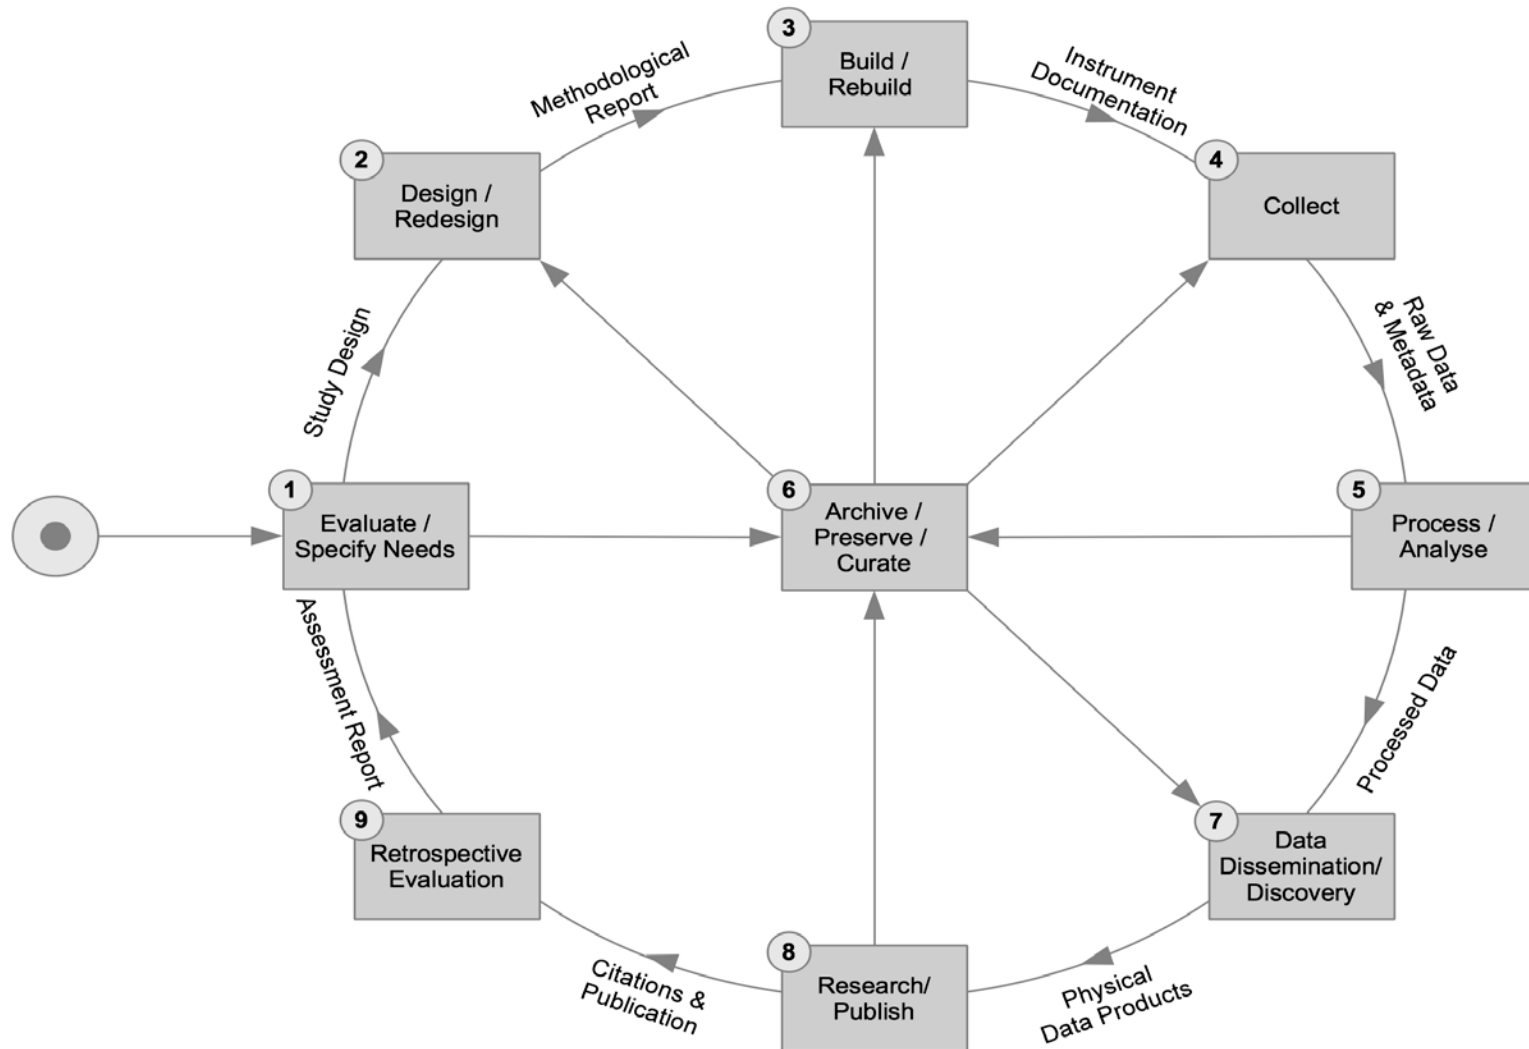

Generic Longitudinal Business Process Model: Repeated Survey, One Panel, No Redesign, One Publication

First round is Red, Second Round is Blue. Starts at 1.1, ends at 8.7

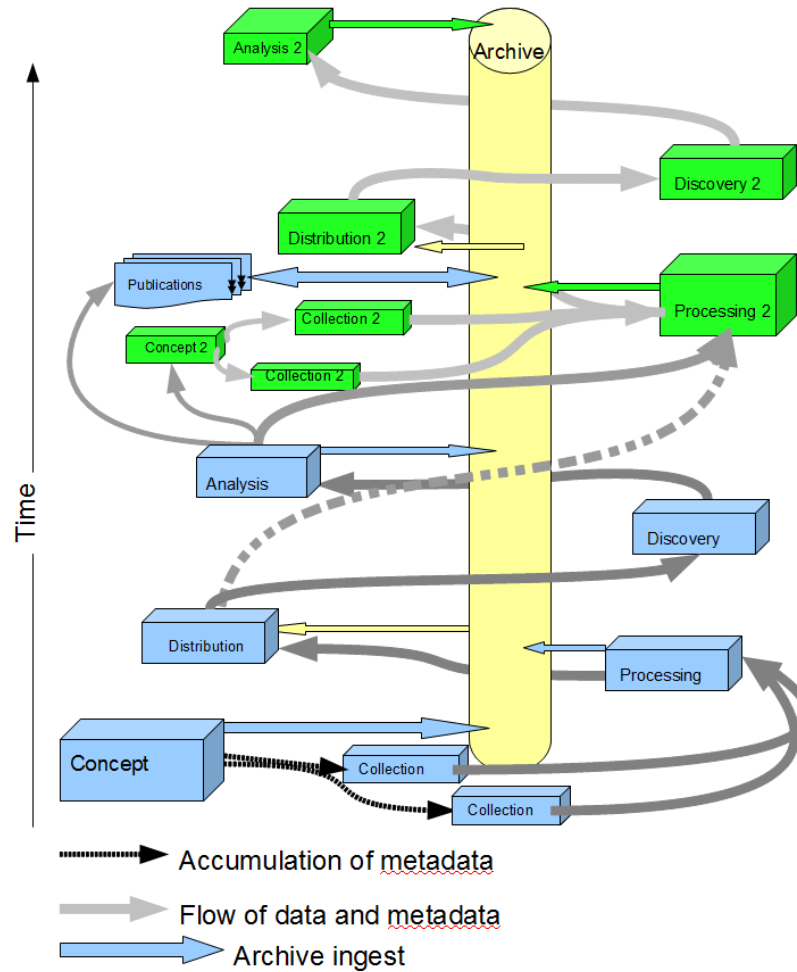

Circle View

Generic Longitudinal Business Process Model: **Circle View**

Tornado View

Questions

- How do you see this model being used in your organization?
- Could this be useful to the independent researcher? (prompts for project planning?, writing methods section?)
- How does a process model like this fit with DDI?
- How might this be used to describe a sequence of steps, either planned or documenting something that took place?
- Where does GLBPM fit in with GSBPM and, especially now, GSIM?
- Could this lead to extensions to DDI to describe a sequence of steps/events?
- Would we ever want to include in the GLBPM biomedical research activities?
- Should paradata data collection be represented in the GLBPM?

More Questions

- One might call Slide 10 a "building block".
 - Can you define other "reusable" building blocks?
- Once you define a few of these building blocks can you assemble them to tell a few different stories -- like plug-'n-play or the gamification of GSBPM?
