Many other agencies provided data for the KSA and we thank them all for making the data available. Sources for each table or graphical representation are noted herein.

We thank Larry Hoyle, senior scientist, IPSR, for his assistance with the KSA. We also thank IPSR student assistant Anna Tatarko, who provided assistance with data entry and table preparation.

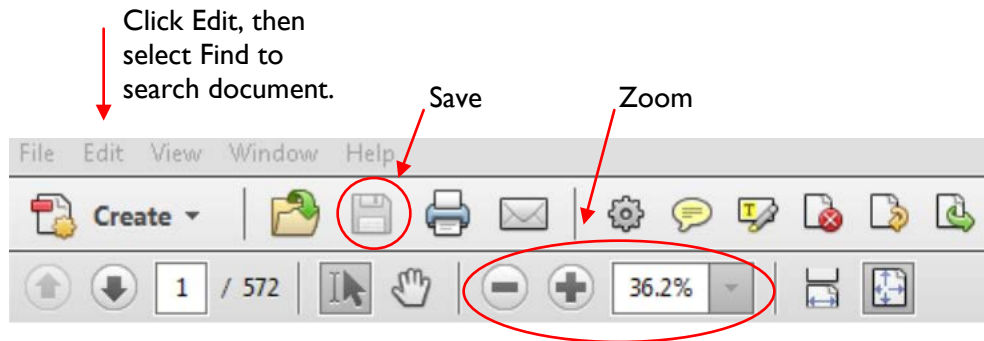

Finally, we hope this edition of the *Kansas Statistical Abstract* will serve as a valuable resource. Please let us know if there are ways we can increase its value.

Searching for Data

Searching for data in PDF files is made easy using the **find** function. Launch the find function by clicking Edit then select find. Enter one or more words in the find box and press enter. The find function then searches the entire document marking each point in the document where it locates your text.

Tip: Practical uses of the find function include entering a city or county name to locate all pages that contain data for that city or county or searching by keyword to find data on a specific topic.

Map Layers

Some maps in the *Kansas Statistical Abstract*, as indicated by the  symbol in the upper right corner, provide the option to turn on and off specific layers shown in the map. Click the **layers icon** to view availability and click the **eye symbol** to turn on or off individual layers within the selected map.

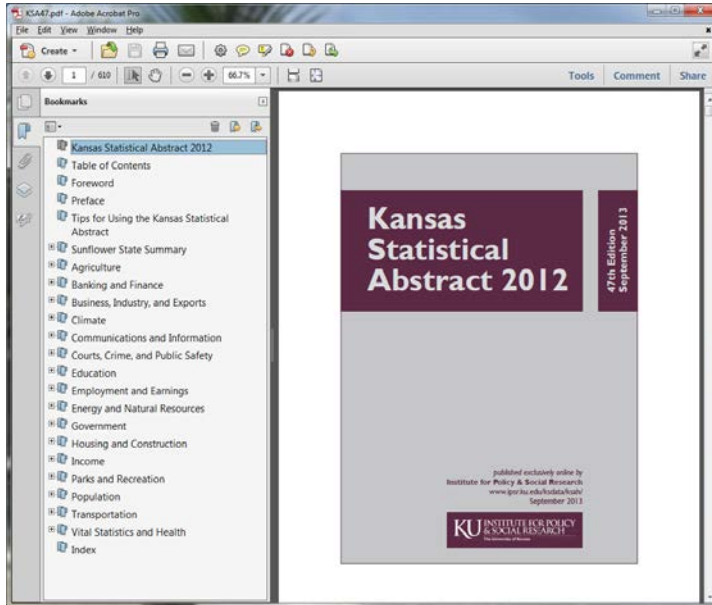

Zoom Tool

The **zoom** tool (shown on previous page) in Adobe Acrobat will allow you to zoom in or out on any page. The zoom in feature may be especially useful on some maps.

Table of Contents

The Table of Contents panel contains links to each individual section or chapter in the *Kansas Statistical Abstract*. Click the + symbol next to any chapter to expand the list of the tables in the chapter. Then click on the title of the table to automatically go to that table in the document.

Limitations of the Data

Some data in the *Kansas Statistical Abstract* are subject to sampling variability; see source for complete methodology and sampling information.

Data from the American Community Survey are shown with a 90% margin of error. We recommend calculating the coefficient of variation to determine the relative amount of sampling error for an estimate and using the following guidelines:

Coefficient of Variation (CV)	Reliability
Less than 12%	Reasonably reliable
12 – 40%	Use with caution
Greater than 40%	Do not use

Calculating the Coefficient of Variation (CV)

$$CV = ((MOE_{ACS} / 1.645) / EST_{ACS}) * 100$$

where MOE_{ACS} is the 90% margin of error and EST_{ACS} is the data estimate.

Beginning in 1975, a farm is defined as any place with annual sales of agricultural products of \$1,000 or more. Between 1959 and 1975 a farm was defined as a place of 10 or more acres that had annual sales of agricultural products of \$50 or more or a place of less than 10 acres that had annual sales of \$250 or more. Prior to 1959 a farm was defined as a place of three acres or more in size with a value of farm products amounting to \$150 or more. Places of less than three acres with sales of \$250 or more were also considered farms.
