EXECUTIVE SUMMARY

Web 2.0 has revolutionized the way people interact and how they solve problems. Engineering industries are embracing technology boom in order to maintain the rapid growth and diversification needed to compete in today's market. With growing use of these technologies come new challenges for management such as effective knowledge sharing and project management of physically separated resources. This report introduces a framework for incorporating modern Web 2.0 technologies into while minimizing these challenges through a management frame work for inter-organizational crowd-sourced projects called Idea-Nation.
