Project will digitize ancient fossils

A $600,000 effort funded by the National Science Foundation’s Advancing Digitization of Biological Collections program will digitize thousands of fossils collected over hundreds of years and housed at KU Natural History Museum and Biodiversity Institute. They hold a record of ancient life that could be especially useful today in predicting how climate change could alter our planet’s biodiversity and distribution of species.

Indigenous foods good for health

In academic circles, Devon Abbott Mihesuah is known as a KU historian with indigenous roots who researches decolonization strategies and advocates traditional diets for Native Americans.

CLAS honors outstanding advisers

The College of Liberal Arts and Sciences at KU recognized several faculty members and one program, atmospheric science with the Department of Geology, for outstanding advising.

Tony Arnold Research Stipend

The College of Liberal Arts and Sciences at KU awarded the Tony Arnold Faculty Research Stipend to William Staples, professor and chair of the Department of Sociology, who is researching the history of the birth certificate.

Library adds rare European books

A gift of 16th, 17th, 18th and 19th century rare books from Eliot S. Berkley to the Kenneth Spencer Research Library at KU will offer scholars new insights into the period in such diverse topics as religion, philosophy, military, science and more.
Theatre students honored

Forty-nine KU students received more than 75 awards and scholarships totaling more than $119,000 given by the Department of Theatre last month during the annual Stage Supper.
