Partnership takes aim at distracted driving

The University of Kansas has partnered with a leading voice-command service company on technologies designed to mitigate distracted driving. Beginning this fall, a team of researchers from KU's Center for Design Research will work with California-based Voice Assist to analyze the distracted driving market and the company's voice-command service, which enables drivers to make calls, send or respond to texts and e-mails and post to social networks, all by voice command.

FEATURED MULTIMEDIA
Training for grain elevator rescue

The Kansas Fire & Rescue Training Institute at KU is providing grain engulfment rescue training in communities across Kansas. The daylong course combines classroom instruction with training on a 35-foot trailer that includes a grain bin, grain hopper and equipment to pull a person from a bin.
