Dr. Naimith Defends

Football in Address

Dr. James Naimith, inventor of basketball, and professor of physical education at the University of Kansas, made an address last night at the Kansas City Hotel. Dr. Naimith praised the enthusiasm of the students. He reminded them of the importance of the game.

In the old days of the flying wedge, when football was less open than today, men were killed. I played four years in the day of the flying wedge. I came out all right. Then a few years ago I started to take a shovel, split in the tub and broke three ribs.

There are thousands of boys and young men playing football. A few are injured and fatally. The game is one of contact. Injuries will occur. They are of bad habits, too. Many of them slop in the tub and are killed or injured.
