† The projections for United States population are based on a completed cohort fertility rate of 2.1. The new Bureau of the Census projections were prepared using the inflation-deflation variant of the cohort-component method. An immigration rate of 400,000 per year was assumed. Kansas projections assumed that each age group would have similar mortality and migration patterns as it had from 1960-1970, that survival rates for those aged 75 or older would remain constant, and that birth rates would follow the series E projections.

NOTE: Because of rounding, individual figures may not add to totals.

*1970, 1973-1976 population densities have been revised according to 1970 Census land area figures. Data for 1970s provided in previous *Kansas Statistical Abstracts* are therefore erroneous. 1950 and 1960 figures are according to their respective Census year's land area figures.

r—Revised.

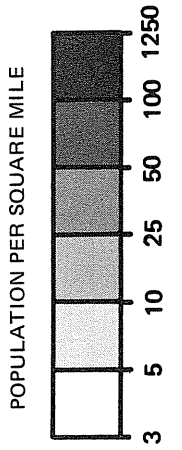

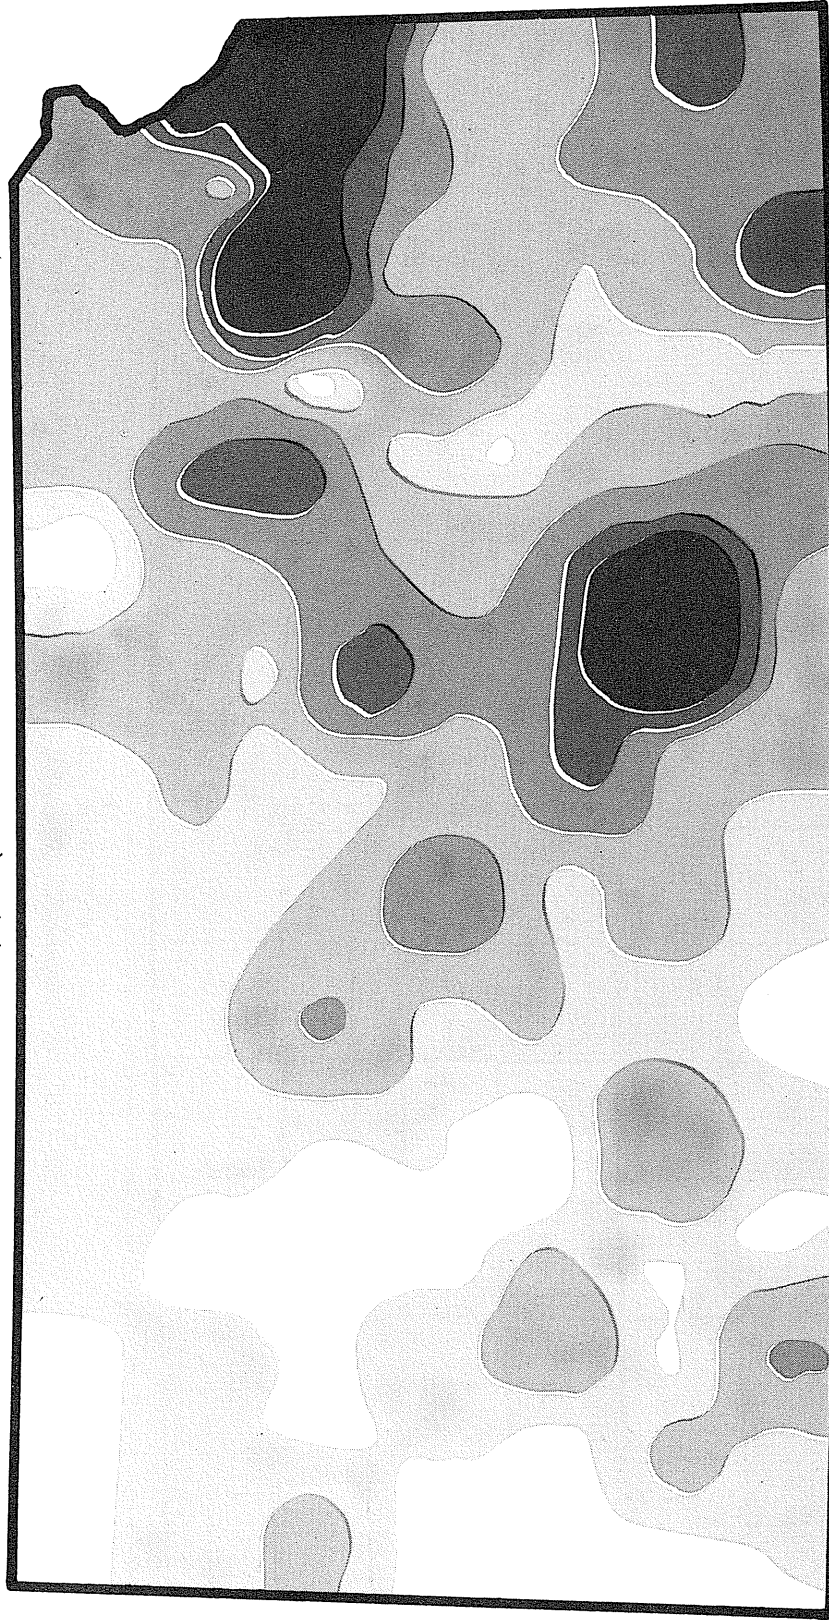

NOTE: Population density is defined to be the average number of persons per square mile in a given area, i.e., the number of inhabitants in the area divided by the number of square miles in the area.

Bank debits are "...debits to deposit accounts except interbank accounts. More specifically they include debits at reporting commercial banks, member and non-member, to deposit accounts of individuals, partnerships, corporations, the United States Government, and state and local governments. The figures include debits to time and savings accounts, payments from trust funds on deposit in the banking department, and the payment of certificates of deposit. The figures exclude payments of certified and officers' checks, payments in settlement of clearinghouse balances, charges to expense and miscellaneous accounts, corrections and similar charges, and debits to the accounts of other banks, that is, to 'interbank deposits.' "

¹ An acceleration in fiscal transactions accounts for a major portion of the rise in debits for 1972-1974.

² Includes woodland pasture.

³ Includes pastureland other than cropland and woodland pasture, rangeland, and land in house lots, barn lots, ponds, roads, wasteland, etc.

* The excess of farm acreage over approximate land area is due to the fact that the entire acreage of a farm is tabulated as in the county in which the headquarters are located, even though a part of the farm may be situated in an adjoining county.
