

IN 2009, KU became the first public university in the United States to adopt a faculty-initiated open access policy for faculty research published in peer-review journals.

The policy was endorsed by KU Faculty Senate on April 30, 2009, and “asserts the rights of KU faculty to provide broad, free access to their journal publications to colleagues around the world.”

For additional information about participating in the Open Access policy, visit openaccess.ku.edu. To view the faculty policy document, visit documents.ku.edu/policies/governance/OpenAccess.htm.

“Open access makes it possible for our work to be read by people independent of their university affiliation or the ability of a library to purchase access to increasingly-expensive journals subscriptions. If our goals are to educate and to spread our ideas, we should be doing all we can to publish in ways that people in developing nations and outside academia can read. Supporting for-profit commercial presses that seek to limit access to our ideas works against those goals.”

– Dr. Nancy Baym, *KU professor of communication studies*

KU FACULTY can articulate their copyrights when their scholarly work is accepted for publication by retaining sufficient rights in their publication agreements. Once the necessary rights are retained, faculty members provide citation information and a

copy of the publication to staff in the Center for Digital Scholarship. We then provide efficient and effective access to these publications by means of KU ScholarWorks (kuscholarworks.ku.edu), the university's institutional repository.

open access

How KU Libraries' CENTER FOR DIGITAL SCHOLARSHIP can help:

Before you sign the publishing agreement: ADVICE AND CONSULTATION ABOUT COPYRIGHTS.

We offer one-on-one, personalized consultation to KU faculty and researchers. E-mail a copy of the publication agreement to the Scholarly Communications Program Head **Ada Emmett at libcds@ku.edu** to determine whether the agreement allows for open sharing or whether adjustments to the agreement might be considered. A good starting point for determining what rights are in the standard agreement for a given journal (as well as embargo information) is the SHERPA/RoMEO site: www.sherpa.ac.uk/romeo.

After publication: ONE-STEP SUBMISSION OF YOUR WORK.

E-mail the citation information, a copy of the work, and any embargo or special conditions information to libcds@ku.edu. Our staff will upload your work to KU ScholarWorks on your behalf.

MAKING YOUR PREVIOUSLY PUBLISHED WORK MORE VISIBLE via KU ScholarWorks.

We can also enter citation information for your prior publications into KU ScholarWorks; if open access rights were not retained, a link to the publisher version can be provided instead of full-text. Contact Emmett for more information.

Ongoing: SUBJECT LIBRARIANS AND DEPARTMENTAL LIAISONS FOR OPEN ACCESS.

We work with academic departments on an ongoing basis through their departmental liaisons, and through our subject librarians for those departments, to keep faculty apprised of new information, resources and tools available regarding Open Access at KU.

KU SCHOLARWORKS: BEYOND ARTICLES

KU ScholarWorks isn't just for journal articles; for example, theses and dissertations for all KU students since 2008 are published there. You may also consider submitting other scholarly and creative work, including:

- Performances, interviews and other audio and visual recordings
- Creative works
- Datasets
- Technical reports
- Monographs
- Book chapters

For more information, contact the Center for Digital Scholarship (libcds@ku.edu or 785-864-0330) or visit cds.lib.ku.edu/programs/scholarly-communication.

BENEFITS OF OPEN ACCESS

Providing open access to your scholarly work benefits the community of researchers at KU, in your field and throughout the world by making that work more freely available. The benefits to scholars who offer open access to their research include:

• **Federal Grant Compliance:**

KU ScholarWorks helps meet dissemination guidelines specified by many federal grants. Visit the Support for Grant Applicants page (www2.ku.edu/~scholar/docs/grantsupport.shtml) for more information.

• **Increased visibility:** KU ScholarWorks is searchable via search engines such as Google Scholar and offers much greater visibility than research databases. Your work becomes more visible to fellow researchers, funders, students and the world.

• **Tracking the use and impact of your work:** KU ScholarWorks tracks download statistics on each article, including the number of views, downloads and the location of readers by country. Overall statistics can be found at www2.ku.edu/~scholar/docs/stats.shtml.

• **Preservation, stability and longevity:** KU ScholarWorks provides long-term preservation for your materials by managing backups and ensuring that your work remains accessible. Every item in KU ScholarWorks has a permanent, citable URL that will not change. In addition, KU Libraries will provide lifecycle stewardship of your files into the future, ensuring that as technology and formats evolve, your work will remain accessible and usable.
